Making Manchester Fairer: Life Expectancy

	Male (years)	Female (years)
Life expectancy (England)	79	83
Life expectancy (Manchester)	74	79
Life expectancy (Manchester's least disadvantaged fifth of areas)	79	83
Life expectancy (Manchester's most disadvantaged fifth of areas)	71	76

An estimated 6,380 people were living with HIV in Greater Manchester in 2021

HIV diagnosed prevalence rate per 1,000 population aged 15-59, 2021

Greater Manchester	Rate ¹	Number ²	Status
Manchester	5.85	2,211	Very high prevalence
Salford	5.40	881	
Rochdale	2.38	306	High prevalence
Tameside	2.24	293	
Bury	2.17	235	
Bolton	2.16	354	
Trafford	2.03	275	
Oldham	1.78	243	Low prevalence
Stockport	1.57	257	
Wigan	1.41	267	

340 people living with undiagnosed HIV

Source: UKHSA Sexual and Reproductive Health Profiles

Definitions: 1 - Rate per 1,000 population aged 15 – 59 | 2 - Number of people aged 15 to 59 seen for HIV care

37.1% of HIV diagnoses are made at a late stage in GM

HIV late diagnosis in people first diagnosed with HIV in the UK, 2019/2021

Greater Manchester	% ¹	Number ¹
Tameside	53%	9
Bolton	50%	7
Bury	47%	7
Manchester	39%	51
Oldham	35%	7
Rochdale	35%	6
Wigan	30%	6
Trafford	30%	6
Salford	30%	13
Stockport	23%	3

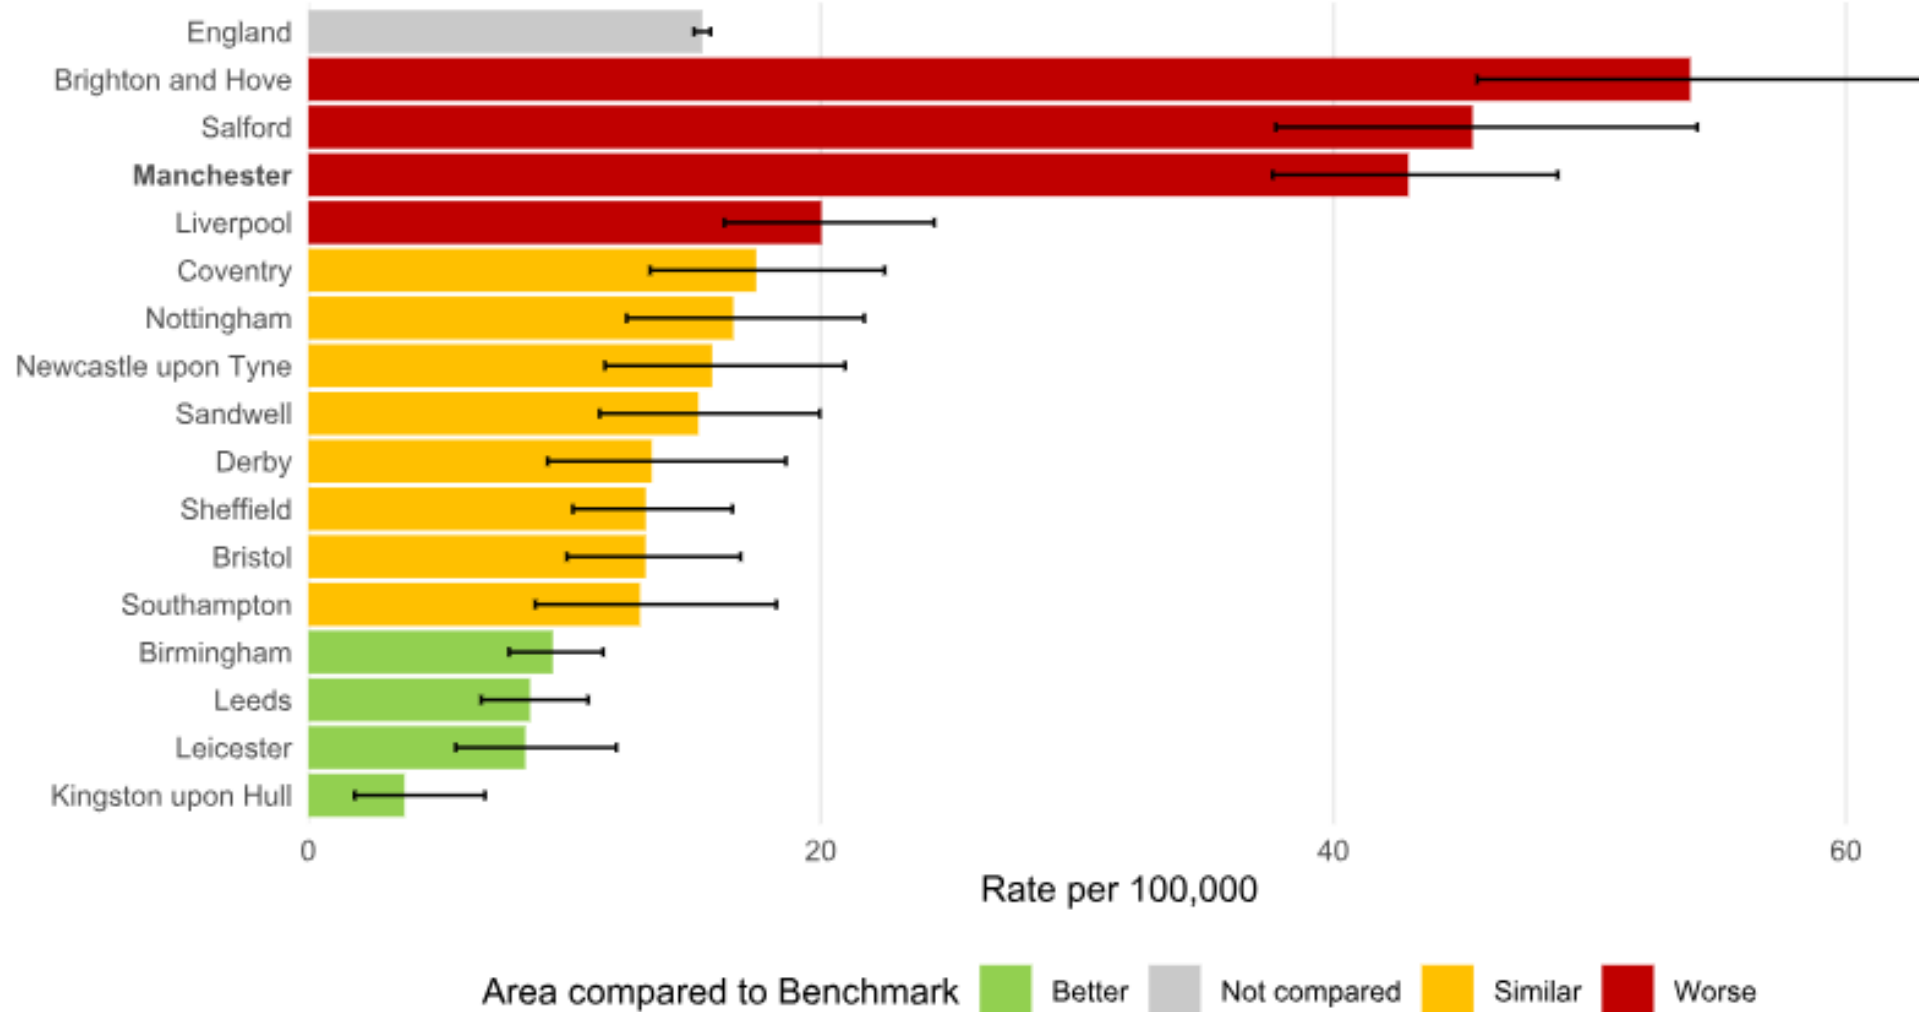

Compared to goal

Source: UKHSA Sexual and Reproductive Health Profiles

Definition: 1 - People with a CD4 count of less than 350 cells per mm³ within 3 months of the date of their HIV diagnosis. CD4 count not reported for all individuals.

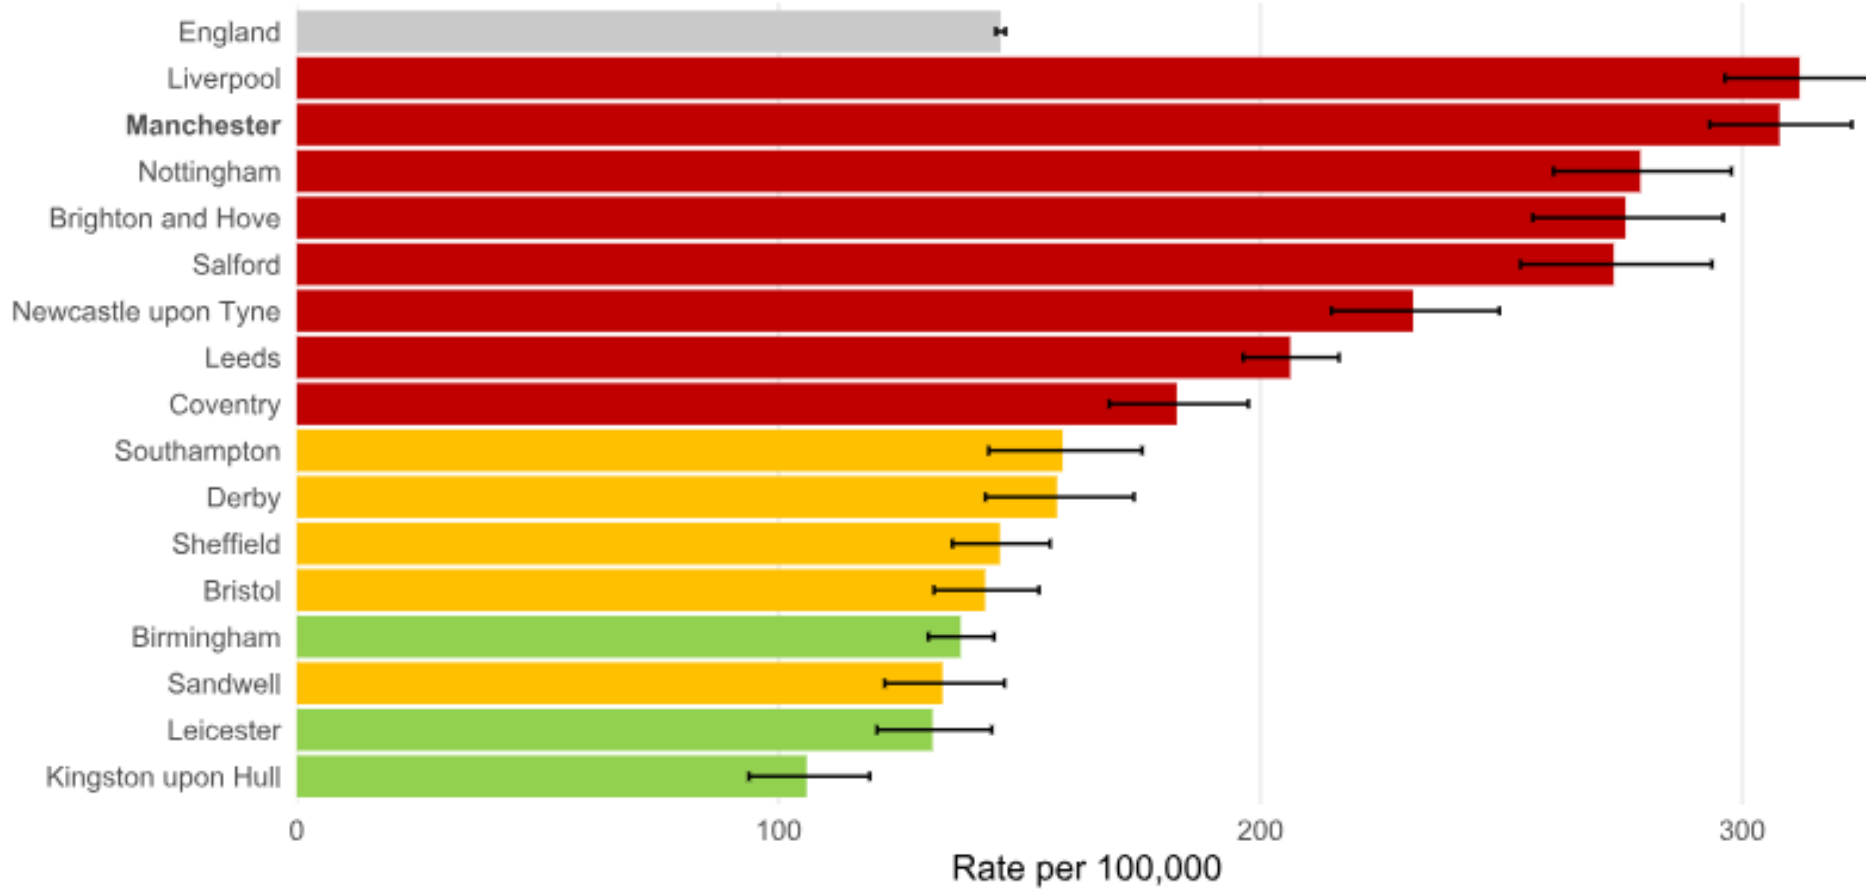

Rates per 100,000 population of syphilis in 16 similar local authorities compared to England: 2022*

*Similar refers to statistical nearest neighbours, derived from CIPFA's Nearest Neighbours Model

Rates per 100,000 population of gonorrhoea in 16 similar local authorities compared to England: 2022*

Area compared to Benchmark ■ Better ■ Not compared ■ Similar ■ Worse

Opt-Out Screening for HIV and Hepatitis C in Manchester's Emergency Departments

HIV

Since all sites operational (Sep 22):

4.4

**new HIV diagnoses/month
across the three EDs at MFT**

>70

**individuals newly diagnosed with HIV
from the start of the programme up to now**

First 12 months analysis (Dec 21 - Dec 22):

- 42% 'very late' (CD4 <200), 33% 'late' (CD4 200-350), 25% CD4 >350
- Over 70% of individuals did not present with HIV-related conditions and would likely have been missed.

HCV

Since all sites operational (Sep 22):

11.5

**new hepatitis C diagnoses/month
across the three EDs at MFT**

>200

**Most would have been missed without the
testing programme.**

First 12 months analysis (Dec 21 – Dec 22)

- 1.6% of pts tested were HCV ab positive (de-duplicated data).
- HCV RNA positive prevalence 20.4%
- About ¼ "elderly": 60 and above
