

3 - 4 MAY 2018

2018 CONTROLLING THE HIV EPIDEMIC SUMMIT

Patient and other Key Population Perspectives: Europe

Bryan Teixeira, EATG

‘Controlling’ the epidemic

- By 2020: 90-90-90...90
 - By 2030, 95-95-95...95
- **Zero discrimination?**
 - PLHIV in healthcare settings
- **Metrics simplify**
 - metrics leave people behind

Failures and people left behind

- **Lack of targeted responses that recognize the diversity of WHO European Region**
 - In-country sub-populations, e.g., migrant women and children, Roma, detainees
 - Central, Eastern, Southern Europe, etc.
 - Replicability of good practice
 - PLHIV ageing and quality of life

Successes

- **Addressing stigma, discrimination and promoting human rights**
 - Social determinants and enabling environments
 - Criminalization of HIV transmission
- **Combination prevention**
 - Condoms, testing, harm reduction, PEP, PrEP, TasP/U=U

Room for urgent improvement

- **Address barriers to accessing diagnostics**
 - Expand rapid HIV testing (e.g., in community, clinical, and youth settings) and viral load testing
- **Strengthen civil society partners**
 - Controlling the epidemic in controlling, less democratic contexts
- **Move to more integrated approaches**
 - HIV, TB and Hepatitis by 2030

Summary: Across Europe

- **Health and human rights**
- **Combination prevention**
- **Test: Community & wider health system**
- **Affordable and universal access to ARVs**
- **The fourth 90/95**

Thanks

- **To the many members of the European AIDS treatment Group who provided input**
- **To the organizers for this opportunity**
